WILDCAT AND SAN PABLO CREEKS CONTRA COSTA COUNTY, CALIFORNIA

CONGRESSIONAL DISTRICT: 7th District, Rep. George Miller

PROJECT DESCRIPTION: This project is located in Contra Costa County, California. It is designed to provide flood protection to the City of Richmond and a portion of Contra Costa County. The proposed project modifications are designed to promote fish passage and riparian restoration. These modifications would allow upstream passage of Anadromous fish, specifically endangered Steelhead Trout.

FISCAL YEAR 03 BUDGET: \$0

POSSIBLE SOLUTIONS: Improvement of the existing sedimentation basin and creation of a low flow channel in conjunction with modifications to the existing fish passage structures. This could include construction of potential bypass channels and/or modification to the existing flood control structures, which will not adversely affect the existing flood control project, including its capacity for conveying floodwaters.

PRESENT STATUS: The Detailed Project Report (DPR) is scheduled for completion in January of 2003.

FUTURE EFFORTS: Upon completion and approval of the DPR, the District will initiate the Plans and Specifications and begin PCA negotiations in June of 2003, subject to available funding.
